

Striking

Features at a glance.

Centre Punch
Features a pointed tip, used to punch a starting point for drilling in metal, marking location holes and lines, or to punch a location point for dividers when marking out work.

Nail Punch
Setting nails below surface in woodworking, inserting putty and other fillers.

Starter Drift Punch and Drift Punch
Installing and removing pins and shafts and aligning holes.

Ball Pein Hammer
The Ball Pein Hammer, also known as the Engineers Hammer is used for metalwork (driving cold chisels and punches, striking hard and soft metals). It can also be used for driving masonry nails. Ball Pein Hammer heads are made from forged steel which has been tempered and hardened. Forged steel is better than cast steel as it reduces metal fatigue, increases safety and lasts longer.
